

The BioCrossroads logo, consisting of a stylized "X" made of four colored segments (green, blue, yellow, and red) followed by the text "BioCrossroads" in a black sans-serif font with a registered trademark symbol.

BioCrossroads is Indiana's initiative to grow the life sciences, a public-private collaboration that supports the region's research and corporate strengths while encouraging new business development. BioCrossroads provides money and support to life sciences businesses, launches new life sciences enterprises, expands collaboration and partnerships among Indiana's life science institutions, expands science education and markets Indiana's life sciences industry.

Why is data science/analytics important to your organization?

Data is critical to our organization as we measure several metrics in Indiana's life sciences industry on an annual basis, including economic impact, wages, capital expenditures, exports, employment and companies.

Data science is also important to our organization as a representative of the life sciences industry. Data and their analytics are critical for the discovery, manufacturing and administration of new treatments and therapeutics. In addition, data science can enable faster and better care in healthcare settings.

What programs at your organization focus on data science and analytics?

BioCrossroads publishes a [Book of Data and Organizations](#), a directory of Indiana enterprises in the health-data intersection. The directory includes snapshots of ten organizations who control data assets – data sets, data talent, and/or data technology.
